PROBLEM:

- SDV software development is slow and complex
- Manual requirement → design → code → test cycle
- OTA updates require rapid integration
- High risk of defects and compliance issues

GOAL: Faster, predictable automotive software development

OUR SOLUTION:

An end-to-end GenAI pipeline that automatically converts high-level vehicle feature requirements into:

- Structured requirements, handles multiple protocols & data formats
- Microservice API's & source code
- Auto-generated test cases
- Live Vehicle Health dashboard

KEY INNOVATIONS:

- OTA-aware automatic service generation
- Auto test case creation & execution
- LLM performance comparison
- Compliance-aware code generation (MISRA / ASPICE)

IMPACT & KPI'S:

⏱️ 90% faster software development
🐞 70% fewer defects via auto-testing
⚡ New SDV services deployed in minutes
📈 Scalable across EV / ICE / Hybrid platforms
